

APOLLO RESOURCES PURCHASES NATURAL GAS PROCESSING EQUIPMENT

Wednesday, November 2, 9:00 am, ET

DALLAS--(BUSINESS WIRE)—November 2, 2005—Apollo Resources International, Inc. (OTCBB: AORR - [News](#)) today announced that it has purchased natural gas processing equipment from Neptune Leasing, Inc., a Texas corporation. The equipment includes six nitrogen reduction units and two cryogenic processing units.

Nitrogen reduction units condition natural gas streams that contain elevated levels of inert gases in order to conform to pipeline transportation specifications. Similarly, cryogenic processing units reduce the BTU (British Thermal Unit) content of natural gas by removing the heavier hydrocarbon elements to meet pipeline specifications.

Apollo Chief Operating Officer Wayne McPherson said the Company intends to deliver a fully reconditioned and operational nitrogen reduction unit and a fully reconditioned and operational cryogenic processing unit to Apollo's Hospah field in New Mexico.

"The gas reserves in the Hospah field have elevated levels of nitrogen and have a rich BTU content," he said. "This equipment is critical in our ability to produce and provide natural gas from this field."

Dennis McLaughlin, Apollo CEO, stated, "We believe this development represents a significant step toward developing our natural gas assets and executing our business plan. Given the price environment of domestic natural gas, we are currently focusing on additional opportunities, in particular those that can increase the value and efficiency of our New Mexico and Oklahoma assets."

Apollo Resources International is a public energy company focused on the acquisition and development of upstream oil and natural gas production assets. Additionally, the Company evaluates and develops existing and future alternative energy sources.
